COURSEWORK

Module	Internet Technology
Coursework Title	Personal Portfolio Website
Coursework Type	Practical Exercise

Personal Portfolio Website

Project Overview

In this project, students will design and develop a personal portfolio website using HTML and CSS. A portfolio website showcases your personal and professional information such as your name, skills, and sample projects. This project helps students understand how to create well structured and visually appealing web pages using HTML for structure and CSS for styling.

Learning Outcomes

By the end of this project, students will be able to:

- Apply HTML to create a structured webpage layout.
- Use CSS to style and format web content.
- Combine structure and design to create a simple, professional looking web interface.
- Write clean, readable, and well-commented HTML and CSS code.

Description

Design and build a personal portfolio website that includes the following sections:

- A profile image and introduction section

- Full name, short bio/designation, and a list of skills

- At least two social media icons or links (e.g., Facebook, LinkedIn, Instagram)

- A projects or work showcase section (placeholder images or text can be used)

- CSS styling for color, layout, and basic design

- Optional: hover effects, buttons, or a theme color for interaction

It is encouraged to follow the layout wireframe shared in class for structure and content arrangement.

Project Submission Requirements

You must submit a .zip file containing the following items:

1. **index.html** – The main portfolio homepage.

2. **style.css** – The external stylesheet used for page design.

3. **assets/** folder – Containing images, icons, or other supporting files.

Additional Guidelines:

- File and folder names must use lowercase letters and no spaces (e.g., index.html, style.css, assets/).

- Include comments in your HTML and CSS files to explain major code sections.

- Ensure your code is properly indented and readable.

- Submit your .zip file via the Learning Management System (LMS).

Deadline

- Refer to the LMS for the official deadline date.

Late submissions will negatively impact your academic progress and may affect your final evaluation.
